Art Unit: 1623

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 28, 2007 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 53, 55 and 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cham et al (AU-B-57853/80).

Cham et al disclose a method of treating psoriasis with at least one active ingredient selected from the group consisting of solamargine, solasonine and mono-

and di-saccharides of solasodine (page 17, claims 1-2). Since solamargine and solasonine are known to be useful for the treatment of psoriasis as disclosed by Cham et al, it would have been prima facie obvious to a person having ordinary skill in the art at the time the claimed invention was made to combine solamargine and solasonine in equal proportion into a single composition because such a person would have expected the resulting composition to be useful for treating psoriasis.

Applicant's arguments filed January 29, 2007 have been fully considered but they are not persuasive.

Applicant contends that while Cham et al disclose a composition comprising 33% solasonine and 33% solamargine, said composition also includes a third portion made up of di- and mono-glycosides and rhamnose. This argument has not been found persuasive since Cham et al disclose the treatment of psoriasis with a compound selected from the group consisting of solamargine, solasonine and mono- and di-saccharides of solasodine (claim 2) i.e. Cham et al teach that only one compound such as solamargine or solasonine can be used for the treatment of psoriasis. To combine two specific compounds disclosed by Cham et al, which are disclosed to be useful for the treatment of psoriasis, into a single composition would have been prima facie obvious to a person having ordinary skill in the art at the time the claimed invention was made.
